Holography

Waves created by souls should act holographically, that is to say that these waves should create 3 dimensions' space. Waves order matter. We could find our soul's material views with holography's process.

To create a holography in matter, it would therefore be necessary to capture a soul as God would do without us, being able to reach this soul because it is located in another universe. This is fully impossible.

Holography makes it possible to analyze mind. We see waves to regulate when we are sick. But how else can we do it other than through matter ? Studying body's microwaves would make it possible to create computers that create wave movements in the body to repair a sick body.
